

**Electro Smog? Are electromagnetic fields capable of affecting your health?**

Electro-smog refers to the huge amount of electromagnetic fields (EMF) present literally everywhere on this planet. There are more than 10,000 scientific papers available, stretching back over 40 years, on all aspects of the above subject, hence it shall not be necessary for us to dissect them and plagiarize their findings here.

This leaflet is by no means condemning technology or recommending living without all the electrical driven conveniences of today or tomorrow for that matter. However, there is much ongoing controversial and emotional discussion over the possible effects which electrical and magnetic fields can produce in the bio-system of all living organisms including mankind.

Invisible energy fields emanating from electrical and magnetic devices such as High Voltage electrical cables, transformers & sub-stations, radio and television transmitters, microwave transmitters, mobile phone transmitting masts, mobile phones, radio telephones, pagers, electrical appliances, as well as office, household, shop and hotel wiring are constantly filling our environment and although you cannot see them, they are slowly causing effects on each and every one of us.

Balanced – Bio-Systems – Unbalanced

Man has not been equipped with an organ to detect or combat such intrusions although these all have the potential to interfere with his bio-system, which is normally in a state of fine balance. Perhaps this is what is behind the burgeoning number of electro-sensitive people reporting symptoms such as sleep disorders (sleeplessness, restless sleep, early and abrupt waking), nervousness, internal disruptions, irritability, lack of concentration, loss of memory, lethargy, cramps, headaches, etc.

Individual sensitivity to electromagnetic fields is diverse, making it impossible to issue blanket statements on healthy tolerances pertaining to electro-smog. Scientist all over the world, attempting to assemble factual evidence, have made a variety of differing observations in test **subjects** exposed to the same electromagnetic fields, voltages and current.

There is now a scientifically backed movement, pressing the European Commission to outlaw children or using a mobile phone as children absorb 50% more radiation than adults!

**The future looks bleak!**

**Authorities are expecting a phenomenal increase in brain cancers, cataracts, loss of vision and hearing amongst both young and old within the next 5 years\*.**

Meanwhile industry and government state:

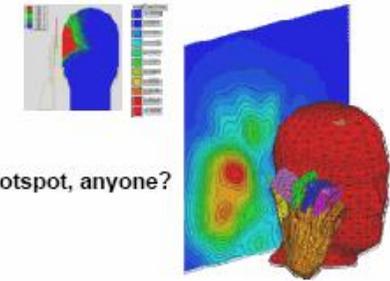

**“Safer phones by 2018”**

**But can we afford to wait that long?**

Hotspot, anyone?

A Nobel Prize for medical science was awarded in 1992 for the discovery that life essential communication between cells is conducted at a frequency of 400Hz. Furthermore bio-resonance medicine informs us that negative effects always accompany an invasion of our biological system by any artificial signal as it will disrupt inter-cellular communication.

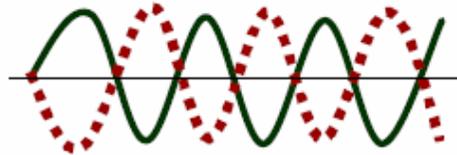

Mysterious unexplained peaks on the Electro Encephalo Graph (EEG) screens during research had medical scientists in Luebeck, Germany puzzled, until quite by coincidence they discovered the cause when one of the staff observed someone using a mobile phone just as the peaks occurred. A correlation between mobile phone use and abnormal changes in brain activity was finally substantiated by credible scientific evidence.

Scientists have recently been able to establish that even during periods of rest, 1 pico Ampere (1pA = 0.00000000001A) of electricity flows between cells. Such findings help shed a new light on health implications of mobile phone use, knowing that a minute amount of electricity is flowing in all of us all of the time. Assuming that our electrical bio-system is more sensitive that say an EEG and knowing that mobile phones are not allowed in hospitals near the intensive care units, it is safe to argue that we have cause to be concerned for our health.

**“An ounce of PREVENTION is worth ... a pound of cure.”**

**Prevention! But HOW?**

So how can you effectively protect yourself and your loved ones from the harmful effects of electro-smog during mobile phone calls? Contact your **KALPAMRIT** consultant. **KALPAMRIT** is the company doing much about e-smog in your personal environment i.e., in your home, while at work or in a shop or hotel.

**This diagram shows how destructive interference works; the red cancels out the black – (unnecessary information)**

**KALPAMRIT** Zero Impact work on the principle of destructive interference to eliminate specific information signals which accompany mobile phone signals for example. Thus **KALPAMRIT** Zero Impact help prevent this negative or harmful information affecting our bio-system. Preliminary tests have shown a dramatic reduction in the negative biological effects by employing such protection devices. In essence they harmonise electromagnetic fields, which is essential for mankind as we are inextricably linked to the biological system that is our environment.

### ***Revolutionary bonus plan!***

Register **FREE** and recommend our products to start your income growing! Ask your **KALPAMRIT** consultant about our fantastic business opportunity.

Any change in the natural environment, through such energies as e-smog from mobile phones for example, represent a serious invasion in our cells' ability to communicate, leading to imbalance, misalignment and allowing disease to follow.

---

**Pictures on how to install your newly purchased ZERO IMPACT are on our website:**  
**<http://www.kalpamritayurved.com>**

---

Remove the battery from your mobile phone as described in your product manual. Peel the protective strip from the back of ZERO IMPACT (sticker) and place the ZERO IMPACT (sticker) on the battery close to but not touching the battery's terminal so that the logo and writing are facing up, relative to the antenna when it is re-installed. Re-install the battery and you are ready to enjoy a less stressful form of mobile communication.

***Congratulations!***

## **Telephones and Answering Machines**

Telephones can emit surprisingly strong EMFs, especially from the handset. This is a problem because we hold the telephone so close to our head. Place the Gauss meter right against the ear piece and the mouth piece before buying a phone.

Some brands emit no measurable fields and others emit strong fields that travel several inches right into your brain. Answering machines, particular those with adapter plugs (mini-transformers), give off high levels of EMFs.
